GG54-2
$\square$ the geometry of plane directions based on the mariner's compass

- this is a unit of angle / arc that is primarily of nautical use:
the point as angle
= the point angle
= the point
= one thirty - seconds of a round angle measured in degrees
$=\frac{1}{32} \times 360^{\circ}$
$=$ eleven and one - quarter degrees
$=11^{\circ} 15^{\prime}$
whence
one point $\quad=11^{\circ} 15^{\prime}$
two points $=22^{\circ} 30^{\prime}$
four points $=45^{\circ}$
eight points $=90^{\circ}$
sixteen points $=180^{\circ}$
thirty - two points $=360^{\circ}$
- as a universal notational device the (often capitalized) initial letter, and possibly other letters,
of the name of an object
may serve as
the denotation of the object
- the compass card
$=\mathrm{dn} \mathrm{CC}$
$=\mathrm{df}$ the set of all directions in the plane
- think of a direction in the plane as consisting of a maximal set of similarly directed parallel lines; thus a single directed line in the plane uniquely determines a direction in the plane
viz
the set of all directed lines
strictly parallel to
the given directed line
- a direction in the plane may be represented by
a ray from an arbitrarily chosen fixed point of the plane which is called
the origin O ,
where O
is the capitalized initial letter
of the word origin
GG54-4
- the compass circle
= dn C (from the initial letters)
$=\mathrm{df}$ the circle
with center at O
and
with some fixed radius say unity
- there are evident canonical correspondences among: directions in the plane, rays from the origin O , radii of the compass circle C , points of the compass circle C
- a point of the compass
= a compass point
= a point
$=\mathrm{df}$ a point of the compass circle C which by the above canonical correspondences
may be equivalently regarded as
a direction in the plane
or
a ray from the origin
or
a radius of the compass circle C

GG54-5

- the four cardinal compass points
with denotation
by the capitalized initial letters
are defined to be:
north $=\mathrm{N}$
east $=E$
south $=\mathrm{S}$
west = W
in the clockwise rotary direction and
a quadrant $=$ a right angle $=$ eight points
apart consecutively,
the north point being chosen first say
and once chosen remaining fixed thruout the discussion
- note that
the words north, east, south , west are also descriptive of directions
in the compass circle toward the points $\mathrm{N}, \mathrm{E}, \mathrm{S}, \mathrm{W}$

## - GP

the four cardinal compass points

GG54-7

- the four first-order intercardinal compass points are defined and denoted as follows:
northeast
$=$ NE
$=$ the directed bisector of the right angle NOE
$=$ the midpoint of the quarter compass circle arc from point N to point E
$=$ halfway from N to E
$=$ four points east of north
northwest
$=$ NW
$=$ the directed bisector of the right angle NOW
$=$ the midpoint of the quarter compass circle arc from point N to point W
$=$ halfway from N to W
$=$ four points west of north

## southeast

= SE
$=$ the directed bisector of the right angle SOE
$=$ the midpoint of the quarter compass circle arc from point $S$ to point $E$
= halfway from S to E
$=$ four points east of south
southwest
= SW
= the directed bisector of the right angle SOW
$=$ the midpoint of the quarter compass circle arc from point $S$ to point $W$
= halfway from S to W
= four points west of south

## - GP

the four cardinal compass points \& the four first-order intercardinal compass points

GG54-10

- the eight second-order intercardinal compass points are defined and denoted as follows:
north-northeast
$=$ NNE
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point N to point NE
$=$ halfway from N to NE
$=$ two points east of north
north-northwest
$=$ NNW
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point N to point NW
$=$ halfway from N to NW
= two points west of north
south-southeast
= SSE
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point $S$ to point $S E$
$=$ halfway from S to SE
$=$ two points east of south
south-southwest
= SSW
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point $S$ to point SW
= halfway from $S$ to SW
= two points west of south

## east-northeast

= ENE
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point E to point NE
$=$ halfway from E to NE
= two points north of east
east-southeast
= ESE
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point E to point SE
= halfway from E to SE
= two points south of east
west-northwest
= WNW
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point W to point NW
= halfway from W to NW
$=$ two points north of west
west-southwest
= WSW
$=$ the midpoint of the $45^{\circ}$ compass circle arc from point W to point SW
= halfway from W to SW
= two points south of west

- GP

the four cardinal compass points \& the four first-order intercardinal compass points \& the eight second-order intercardinal compass points

GG54-13

- the sixteen third-order intercardinal compass points are defined and denoted as follows:
north by east
$=\mathrm{NbE}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point N to point NNE
= halfway from N to NNE
= one point east of north
north by west
$=\mathrm{NbW}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point N to point NNW
= halfway from N to NNW
$=$ one point west of north
south by east
$=\mathrm{SbE}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc
from point $S$ to point $S S E$
= halfway from S to SSE
= one point east of south
south by west
$=\mathrm{SbW}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc
from point $S$ to point $S S W$
= halfway from S to SSW
= one point west of south
east by north
$=\mathrm{EbN}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc
from point E to point ENE
= halfway from E to ENE
= one point north of east
east by south
= EbS
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point E to point ESE
$=$ halfway from $E$ to ESE
= one point south of east
west by north
$=\mathrm{WbN}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point W to point WNW
= halfway from W to WNW
$=$ one point north of west
west by south
$=\mathrm{WbS}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point W to point WSW
= halfway from W to WSW
= one point south of west

GG54-15
northeast by north
$=\mathrm{NEbN}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point NE to point NNE
= halfway from NE to NNE
$=$ one point north of northeast
northeast by east
$=\mathrm{NEbE}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point NE to point ENE
= halfway from NE to ENE
$=$ one point east of northeast
northwest by north
$=\mathrm{NWbN}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc
from point NW to point NNW
= halfway from NW to NNW
$=$ one point north of northwest
northwest by west
$=\mathrm{NWbW}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc
from point NW to point WNW
= halfway from NW to WNW
$=$ one point west of northwest
southeast by south

## = SEbS

$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point SE to point SSE
= halfway from SE to SSE
$=$ one point south of southeast
southeast by east
$=\mathrm{SEbE}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point SE to point ESE
= halfway from SE to ESE
= one point east of southeast
southwest by south
$=\mathrm{SWbS}$
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc from point SW to point SSW
= halfway from SW to SSW
$=$ one point south of southwest
southwest by west
= SWbW
$=$ the midpoint of the $22^{\circ} 30^{\prime}$ compass circle arc
from point SW to point WSW
= halfway from SW to WSW
$=$ one point west of southwest

- the 32 compass points defined above viz
the four cardinal points:
N, S. E, W
the four first-order intercardinal points:
NE, NW, SE, SW
the eight second-order intercardinal points: NNE, NNW, SSE, SSW,
ENE, ESE, WNW, WSW
the sixteen third-order intercardinal points: NbE, NbW, SbE, SbW, EbN, EbS, WbN, WbS, NEbN, NEbE, NWbN, NWbW, SEbS, SEbE, SWbS, SWbW
may all be called the rose points and together their set constitutes the compass rose
- the azimuth of a direction is the sectorial angle measured from north clockwise to the given direction
- the quadrantal notation for a direction is the properly lettered acute angle measured from north or south toward east or west
to the given direction
- below are listed the 32 rose points together with
their azimuth in points $\&$ degrees and
their quadrantral notation; the listing is in increasing order of azimuth; such a cyclic listing
of the 32 consecutive compass/rose points is called
'boxing the compass'

GG54-19

- boxing the compass
$\mathrm{N}=0 \mathrm{p}=0^{0} \quad=\mathrm{N}$
$\mathrm{NbE}=1 \mathrm{p}=11^{0} 15^{\prime}=\mathrm{N} 11^{0} 15^{\prime} \mathrm{E}$
$\mathrm{NNE}=2 \mathrm{p}=22^{0} 30^{\prime}=\mathrm{N} 22^{0} 30^{\prime} \mathrm{E}$
$\mathrm{NEbN}=3 \mathrm{p}=33^{0} 45^{\prime}=\mathrm{N} 33^{0} 45^{\prime} \mathrm{E}$
$\mathrm{NE}=4 \mathrm{p}=45^{\circ}=\mathrm{N} 45^{\circ} \mathrm{E}$
$\mathrm{NEbE}=5 \mathrm{p}=56^{\circ} 15^{\prime}=\mathrm{N} 56^{\circ} 15^{\prime} \mathrm{E}$
$\mathrm{ENE}=6 \mathrm{p}=67^{\circ} 30^{\prime}=\mathrm{N} 67^{\circ} 30^{\prime} \mathrm{E}$
$\mathrm{EbN}=7 \mathrm{p}=78^{\circ} 45^{\prime}=\mathrm{N} 78^{\circ} 45^{\prime} \mathrm{E}$
