GG75-2
identities in commutative rings
$\square$ this is a short semi- systematic listing of various necessarily algebraic identities in commutative rings
$\square$ standing notation

- $\mathrm{R} \in$ com ring wh $\mathrm{R} \leftarrow$ ring
- a, b, c, d, p, q, r, s, x, y, z (perhaps adfixed)
$\in \operatorname{var} \mathrm{R}$
- $\mathrm{n} \in$ pos int
$\square$ here an identity is understood to be an equality of two ring expressions that is true for all values of the variables
$\square$ identities may be roughly classified as
- factorization:
to convert an algebraic sum into a product;
- expansion:
to convert a product into an algebraic sum;
- change - of - form
$\square$ factoring $=$ factorizing
\&
expanding
are opposite / inverse procedures;
given an equation that is read from left to right for one procedure,
then reading the equation from right to left
is the other procedure;
the results are called
factorizations
\&
expansions
$\square$ the simplest example of
factoring / factorization \& expanding / expansion
is to be found in the distributive axiom/law of rings
$a(b+c)=a b+a c$
which connects
the additive \& multiplicative structures of a ring; factoring / factorization: from RHS to LHS; expanding / expansion: from LHS to RHS

GG75-4
$\square$ factoring a difference of like odd powers

$$
\begin{aligned}
& a^{3}-b^{3}=(a-b)\left(a^{2}+a b+b^{2}\right) \\
& a^{5}-b^{5}=(a-b)\left(a^{4}+a^{3} b+a^{2} b^{2}+a b^{3}+b^{4}\right) \\
& a^{7}-b^{7}=(a-b)\left(a^{6}+a^{5} b+a^{4} b^{2}+a^{3} b^{3}+a^{2} b^{4}+a b^{5}+b^{6}\right)
\end{aligned}
$$

etc

$$
a^{2 n+1}-b^{2 n+1}=(a-b) \sum_{i=0}^{2 n} a^{2 n-i} b^{i}
$$

$\square$ factoring a sum of two like odd powers

$$
\begin{aligned}
& a^{3}+b^{3}=(a+b)\left(a^{2}-a b+b^{2}\right) \\
& a^{5}+b^{5}=(a+b)\left(a^{4}-a^{3} b+a^{2} b^{2}-a b^{3}+b^{4}\right) \\
& a^{7}+b^{7}=(a+b)\left(a^{6}-a^{5} b+a^{4} b^{2}-a^{3} b^{3}+a^{2} b^{4}-a b^{5}+b^{6}\right)
\end{aligned}
$$

etc
$a^{2 n+1}+b^{2 n+1}=(a+b) \sum_{i=0}^{2 n}(-1)^{i} a^{2 n-i} b^{i}$
$\square$ factoring a difference of like even powers

$$
\begin{aligned}
& a^{2}-b^{2}=(a+b)(a-b) \\
& a^{4}-b^{4}=(a+b)(a-b)\left(a^{2}+b^{2}\right) \\
& a^{6}-b^{6}=(a+b)(a-b)\left(a^{2}+a b+b^{2}\right)\left(a^{2}-a b+b^{2}\right) \\
& a^{8}-b^{8}=(a+b)(a-b)\left(a^{2}+b^{2}\right)\left(a^{4}+b^{4}\right) \\
& a^{10}-b^{10}=(a+b)(a-b) \\
& \times\left(a^{4}+a^{3} b+a^{2} b^{2}+a b^{3}+b^{4}\right)\left(a^{4}-a^{3} b+a^{2} b^{2}-a b^{3}+b^{4}\right)
\end{aligned}
$$

etc
the pattern is determined by the exponent expressed as a power of 2 times an odd integer

GG75-7
$\square$ factoring a sum of two squares with a special element

$$
\begin{aligned}
& i \in R \& i^{2}=-1 \\
& \Rightarrow \\
& a^{2}+b^{2}=(a+i b)(a-i b)
\end{aligned}
$$

$\square$ factoring a sum of two fourth powers with special elements

- $i \in R \quad \& i^{2}=-1$
$\Rightarrow$
$a^{4}+b^{4}=\left(a^{2}+i b^{2}\right)\left(a^{2}-i b^{2}\right)$
$\cdot i, j \in R \quad \& i^{2}=-1 \quad \& j^{2}=-i$
$\Rightarrow$
$a^{4}+b^{4}=(a+j b)(a-j b)\left(a^{2}-i b^{2}\right)$
$\cdot i, k \in R \quad \& i^{2}=-1 \& k^{2}=i$
$\Rightarrow$
$a^{4}+b^{4}=\left(a^{2}+i b^{2}\right)(a+k b)(a-k b)$
$\cdot i, j, k \in R \quad \& i^{2}=-1 \quad \& j^{2}=-i \quad \& k^{2}=i$
$\Rightarrow$
$a^{4}+b^{4}=(a+j b)(a-j b)(a+k b)(a-k b)$
GG75-9
$\square$ semisum factorizations
- for a semisum of two elements
$2 \mathrm{~s}=\mathrm{a}+\mathrm{b}$
$\Rightarrow$
$4 a^{2} b^{2}-\left(a^{2}+b^{2}\right)^{2}$
$=16 \mathrm{~s}^{2}(\mathrm{~s}-\mathrm{a})(\mathrm{s}-\mathrm{b})$
- for a semisum of three elements
$2 \mathrm{~s}=\mathrm{a}+\mathrm{b}+\mathrm{c}$
$\Rightarrow$
$4 a^{2} b^{2}-\left(a^{2}+b^{2}-c^{2}\right)^{2}$
$=16 \mathrm{~s}(\mathrm{~s}-\mathrm{a})(\mathrm{s}-\mathrm{b})(\mathrm{s}-\mathrm{c})$
- for a semisum of four elements
$2 \mathrm{~s}=\mathrm{a}+\mathrm{b}+\mathrm{c}+\mathrm{d}$
$\Rightarrow$
$4(a b+c d)^{2}-\left(a^{2}+b^{2}-c^{2}-d^{2}\right)^{2}$
$=16(s-a)(s-b)(s-c)(s-d)$

## $\square$ some special factorings

$$
\begin{aligned}
& a^{4}+a^{2} b^{2}+b^{4} \\
& =\left(a^{2}+a b+b^{2}\right)\left(a^{2}-a b+b^{2}\right) \\
& a^{8}+a^{4} b^{4}+b^{8} \\
& =\left(a^{4}+a^{2} b^{2}+b^{4}\right)\left(a^{4}-a^{2} b^{2}+b^{4}\right) \\
& =\left(a^{2}+a b+b^{2}\right)\left(a^{2}-a b+b^{2}\right)\left(a^{4}-a^{2} b^{2}+b^{4}\right) \\
& a^{12}+a^{6} b^{6}+b^{12} \\
& =\left(a^{6}+a^{3} b^{3}+b^{6}\right)\left(a^{6}-a^{3} b^{3}+b^{6}\right)
\end{aligned}
$$

etc

$$
\begin{aligned}
& a^{4 n}+a^{2 n} b^{2 n}+b^{4 n} \\
& =\left(a^{2 n}+a^{n} b^{n}+b^{2 n}\right)\left(a^{2 n}-a^{n} b^{n}+b^{2 n}\right)
\end{aligned}
$$

## $\square$ binomial expansion / formula / theorem

$$
(a+b)^{2}=a^{2}+a b+b^{2}
$$

$(a+b)^{3}=a^{3}+3 a^{2} b+3 a b^{2}+b^{3}$
$(a+b)^{4}=a^{4}+4 a^{3} b+6 a^{2} b^{2}+4 a b^{3}+b^{4}$
etc

$$
(a+b)^{n}=\sum_{i=0}^{n}\binom{n}{i} a^{n-i} b^{i}
$$

GG75-12

## $\square$ squares of multinomials

$(a+b)^{2}$
$=a^{2}+b^{2}+2 a b$
$(a+b+c)^{2}$
$=a^{2}+b^{2}+c^{2}+2(a b+a c+b c)$
$(\mathrm{a}+\mathrm{b}+\mathrm{c}+\mathrm{d})^{2}$
$=a^{2}+b^{2}+c^{2}+d^{2}+2(a b+a c+a d+b c+b d+c d)$
etc

$$
\left(\sum_{i=1}^{n} a_{i}\right)^{2}=\sum_{i=1}^{n} a_{i}{ }^{2}+2 \sum_{1 \leq i<j \leq n}^{n} a_{i} a_{j}
$$

there is a multinomial expansion / formula / theorem generalizing the binomial expansion / formula / theorem but it is rather complicated to write down

GG75-13

## $\square$ some special expansions

$$
\begin{aligned}
& (a+b)^{2}+(b+c)^{2}+(c+a)^{2} \\
& =2\left(a^{2}+b^{2}+c^{2}+a b+b c+c a\right)
\end{aligned}
$$

$$
(a-b)^{2}+(b-c)^{2}+(c-a)^{2}
$$

$$
=2\left(a^{2}+b^{2}+c^{2}-a b-b c-c a\right)
$$

GG75-14
$\square$ identities involving squares of algebraic sums of squares

$$
\begin{aligned}
& \left(a^{2}+b^{2}\right)^{2}=\left(a^{2}-b^{2}\right)^{2}+(2 a b)^{2} \\
& \left(a^{2}+b^{2}+c^{2}+d^{2}\right)^{2} \\
& = \\
& \left(a^{2}+b^{2}-c^{2}-d^{2}\right)^{2}+(2 a c+2 b d)^{2}+(2 a d-2 b c)^{2}
\end{aligned}
$$

## $\square$ the quadratic formula in disguise

$$
\begin{aligned}
& p^{2}=b^{2}-4 a c \\
& \Rightarrow \\
& 4 a\left(a x^{2}+b x+c\right) \\
& =(2 a x+b+p)(2 a x+b-p)
\end{aligned}
$$

$\square$ the Fibonacci two - square identity: the product of two sums of two squares is a sum of two squares

$$
\left(\mathrm{a}^{2}+\mathrm{b}^{2}\right)\left(\mathrm{c}^{2}+\mathrm{d}^{2}\right)=(\mathrm{ac}-\mathrm{bd})^{2}+(\mathrm{ad}+\mathrm{bc})^{2}
$$

this identity in the real field is a virtual restatement of the fact that the absolute value of the product of two complex numbers equals the product of the absolute values of the complex numbers

GG75-17
$\square$ the Euler four - square identity: the product of two sums of four squares is a sum of four squares

$$
\begin{aligned}
& \left(a_{1}^{2}+a_{2}^{2}+a_{3}^{2}+a_{4}^{2}\right)\left(b_{1}^{2}+b_{2}^{2}+b_{3}^{2}+b_{4}^{2}\right) \\
& = \\
& \left(a_{1} b_{1}-a_{2} b_{2}-a_{3} b_{3}-a_{4} b_{4}\right)^{2} \\
& + \\
& \left(a_{1} b_{2}+a_{2} b_{1}+a_{3} b_{4}-a_{4} b_{3}\right)^{2} \\
& + \\
& \left(a_{1} b_{3}-a_{2} b_{4}+a_{3} b_{1}+a_{4} b_{2}\right)^{2} \\
& + \\
& \left(a_{1} b_{4}+a_{2} b_{3}-a_{3} b_{2}+a_{4} b_{1}\right)^{2}
\end{aligned}
$$

this identity in the real field is a virtual restatement of the fact that the norm of the product of two quaternions equals the product of the norms of the quaternions

GG75-18
$\square$ the Degen eight - square identity: the product of two sums of eight squares is a sum of eight squares
in compresssed notation:
for four quaternions $\mathbf{a}, \mathbf{b}, \mathbf{c}, \mathbf{d}$
$\left(|\mathbf{a}|^{2}+|\mathbf{b}|^{2}\right)\left(|\mathbf{c}|^{2}+|\mathbf{d}|^{2}\right)=\left|\mathbf{a c}-\mathbf{d} \overline{\mathbf{b}}^{2}+|\overline{\mathbf{a}} \mathbf{d}+\mathbf{c b}|^{2}\right.$
this identity in the real field
is a virtual restatement of the fact that
the norm of the product of two octonions
equals
the product of the norms of the octonions
note: the product of the two octonions in the compressed notation is
$(\mathbf{a}, \mathbf{b})(\mathbf{c}, \mathbf{d})=(\mathbf{a c}-\mathbf{d} \overline{\mathbf{b}}, \overline{\mathbf{a}} \mathbf{d}+\mathbf{c b})$
wh an octonion is considered to be an ordered pair of quaternions

GG75-19

## $\square$ the Ferrari identity

$$
\begin{aligned}
& \left(a^{2}-b^{2}-2 b c+2 c a\right)^{4} \\
& + \\
& \left(b^{2}-c^{2}-2 c a-2 a b\right)^{4} \\
& + \\
& \left(c^{2}-a^{2}+2 a b+2 b c\right)^{4} \\
& = \\
& 2\left(a^{2}+b^{2}+c^{2}-a b+b c+c a\right)^{4}
\end{aligned}
$$

$\square$ an Euler identity

$$
\begin{aligned}
& \left(\mathrm{abp}^{2}+\mathrm{cdq}^{2}\right)\left(\mathrm{acr}^{2}+\mathrm{bds}^{2}\right) \\
& =
\end{aligned}
$$

$\operatorname{ad}(\mathrm{bps} \pm \mathrm{cqr})^{2}+\mathrm{bc}(\mathrm{apr} \mp \mathrm{dqs})^{2}$

this identity generalizes the Fibonacci identity

$\square$ the trinomial identity
$\mathrm{x}=\mathrm{pr}-\mathrm{bqs}$
\&
$\mathrm{y}=\mathrm{qr}+\mathrm{ps}+\mathrm{aqs}$
$\Rightarrow$
$\left(p^{2}+a p q+b q^{2}\right)\left(r^{2}+a r s+b s^{2}\right)=x^{2}+a x y+b y^{2}$

## $\square$ identity involving cubes of binomials

$$
a(a+2 b)^{3}=a(a-b)^{3}+b(a-b)^{3}+b(2 a+b)^{3}
$$

## $\square$ the Liouville polynomial identity

$$
\begin{aligned}
& 6\left(x_{1}^{2}+x_{2}^{2}+x_{3}^{2}+x_{4}^{2}\right)^{2} \\
& = \\
& +\left(x_{1}+x_{2}\right)^{4}+\left(x_{1}+x_{3}\right)^{4}+\left(x_{1}+x_{4}\right)^{4} \\
& +\left(x_{2}+x_{3}\right)^{4}+\left(x_{2}+x_{4}\right)^{4}+\left(x_{3}+x_{4}\right)^{4} \\
& +\left(x_{1}-x_{2}\right)^{4}+\left(x_{1}-x_{3}\right)^{4}+\left(x_{1}-x_{4}\right)^{4} \\
& +\left(x_{2}-x_{3}\right)^{4}+\left(x_{2}-x_{4}\right)^{4}+\left(x_{3}-x_{4}\right)^{4}
\end{aligned}
$$

## $\square$ two Ramanujan identities

$$
\begin{aligned}
& \left(a^{2}+7 a b-9 b^{2}\right)^{3}+\left(2 a^{2}-4 a b+12 b^{2}\right)^{3} \\
& = \\
& \left(2 a^{2}+10 b^{2}\right)^{3}+\left(a^{2}-9 a b-b^{2}\right)^{3} \\
& \left(4 a^{5}-5 a\right)^{4}+\left(6 a^{4}-3\right)^{4}+\left(4 a^{4}+1\right)^{4} \\
& = \\
& \left(4 a^{5}+a\right)^{4}+\left(2 a^{4}-1\right)^{4}+3^{4}
\end{aligned}
$$

## $\square$ the Lagrange identity

$$
\begin{aligned}
& \left(\sum_{i=1}^{n} a_{i}^{2}\right)\left(\sum_{i=1}^{n} b_{i}^{2}\right)-\left(\sum_{i=1}^{n} a_{i} b_{i}\right)^{2} \\
& = \\
& \sum_{1 \leq i<j \leq n}\left(a_{i} b_{j}-a_{j} b_{i}\right)^{2}
\end{aligned}
$$

$\square$ the Binet - Cauchy identity

$$
\begin{aligned}
& \left(\sum_{i=1}^{n} a_{i} c_{i}\right)\left(\sum_{i=1}^{n} b_{i} d_{i}\right)-\left(\sum_{i=1}^{n} a_{i} d_{i}\right)\left(\sum_{i=1}^{n} b_{i} c_{i}\right) \\
& = \\
& \sum_{1 \leq i<j \leq n}\left(a_{i} b_{j}-a_{j} b_{i}\right)\left(c_{i} d_{j}-c_{j} d_{i}\right)
\end{aligned}
$$

this identity generalizes the Lagrange identity

GG75-27
$\square$ the notion of nth order determinant
\& some of the standard properties
of nth order determinants
carry over to com rings
eg
for and order determinants
$\left|\begin{array}{ll}\mathrm{a} & \mathrm{b} \\ \mathrm{c} & \mathrm{d}\end{array}\right|={ }_{\mathrm{df}} \mathrm{ad}-\mathrm{bc}$
\&
$\left|\begin{array}{ccc}a & b \\ c & d\end{array}\right| \begin{array}{ll}a^{\prime} & b^{\prime} \\ c^{\prime} & d^{\prime}\end{array}\left|=\left|\begin{array}{ll}a a^{\prime}+b c^{\prime} & a b^{\prime}+b d^{\prime} \\ c a^{\prime}+d c^{\prime} & c b^{\prime}+d d^{\prime}\end{array}\right|\right.$

GG75-28
$\square$ the notion of n - vector over R is definable as
an ordered n - tuple of elements of R ;
vectors may be added or subtracted or multiplied by ring elements
on the left or on the right
componentwise;
the dot product is defined as usual and the cross product of two 3-vectors is defined as usual; many of the algebraic vector identities
for the reals say
now also ensue for R;
eg Lagrange's identity for four 3-vectors
$(\mathbf{a} \times \mathbf{b}) \cdot(\mathbf{c} \times \mathbf{d})=\left|\begin{array}{ll}\mathbf{a} \cdot \mathbf{c} & \mathbf{a} \cdot \mathbf{d} \\ \mathbf{b} \cdot \mathbf{c} & \mathbf{b} \cdot \mathbf{d}\end{array}\right|$
expressed suggestively as
dot of crosses
equals
determinant of dots
GG75-29
$\square$ the elementary symmetric functions / polynomials
= the sigmas

- for 2 variables $r_{1}, r_{2}$
$\left(x-r_{1}\right)\left(x-r_{2}\right)$
$=x^{2}-\left(r_{1}+r_{2}\right) x+r_{1} r_{2}$
$=\mathrm{x}^{2}-\sigma_{1} \mathrm{x}+\sigma_{2}$
wh
$\sigma_{1}=r_{1}+r_{2}$
$\sigma_{2}=r_{1} r_{2}$
- for 3 variables $\mathrm{r}_{1}, \mathrm{r}_{2}, \mathrm{r}_{3}$
$\left(x-r_{1}\right)\left(x-r_{2}\right)\left(x-r_{3}\right)$
$=x^{3}-\left(r_{1}+r_{2}+r_{3}\right) x^{2}+\left(r_{1} r_{2}+r_{2} r_{3}+r_{3} r_{1}\right) x-r_{1} r_{2} r_{3}$
$=\mathrm{x}^{3}-\sigma_{1} \mathrm{x}^{2}+\sigma_{2} \mathrm{x}-\sigma_{3}$
wh
$\sigma_{1}=r_{1}+r_{2}+r_{3}$
$\sigma_{2}=r_{1} r_{2}+r_{2} r_{3}+r_{3} r_{1}$
$\sigma_{3}=r_{1} r_{2} r_{3}$
etc
- the fundamental theorem
on symmetric functions / polynomials
states that
any symmetric polynomial in the r's equals
a polynomial in the $\sigma$ 's
eg
$r_{1}^{2}+r_{2}^{2}=\sigma_{1}^{2}-2 \sigma_{2}$ for two variables
$r_{1}^{2}+r_{2}^{2}+r_{3}^{2}=\sigma_{1}^{2}-2 \sigma_{2}$ for three variables
\& likewise for any number of variables;
Newton's identities concern the $\sigma$ 's

GG75-31

## $\square$ for a com unital ring R

$a^{2}+b^{2}=1$
$\Rightarrow$
$\left(a^{6}+1\right)\left(b^{2}+1\right)=\left(a^{2}+1\right)\left(b^{6}+1\right)$
this implication could be called a conditional identity
this conditional identity
gives the trig identity
$\frac{\sin ^{6} \mathrm{~A}+1}{\sin ^{2} \mathrm{~A}+1}=\frac{\cos ^{6} \mathrm{~A}+1}{\cos ^{2} \mathrm{~A}+1}$

GG75-32
